

Ⓐ Axolotlozone

Axolotl Metal and **Ozone Glass Design**, both pioneers in their field, joined forces in September to create a new division, **Axolotl Ozone**.

Axolotl Ozone will offer everything in architectural glass, including formed and textured, deep carved, etched, heavy weight, sandblasted, colour backed and the new 'Lustre' range.

Axolotl's acquisition of Ozone in Australia, heralds a new chapter in its ten years of operating at the forefront of innovative Australian design.

We are delighted we have been able to retain the services of **John Clapin**, who will work on local sales and national distribution. **Warwick Kingston** will remain as operations manager, **Rob McQueen** as production manager and **Nathan Kingston** as Sales Executive.

Axolotl continues to lead the market in semi precious metal application. Now with the addition of architectural glass and unique external façade systems, virtually no creative dream is beyond our capabilities.

Axolotl Ozone is located with Axolotl Metal in Matraville, an easy 15 minutes from the city centre. The new phone number for Axolotl Ozone is **02 9666 1207** and fax number **02 9666 1210**.

For more information on Axolotl Metal, Axolotl Smartfix or the new Axolotl Ozone, visit the freshly revamped Axolotl website - www.axolotlinc.com

Or contact us at slideshow@axolotlinc.com to receive your slideshows on completed Axolotl Ozone work, which demonstrates the range and diversity of this beautiful medium.

Axolotl Ozone are proud to also sponsor the IDA. Visit www.interiordesignawards.com.au for more information.

Other exciting news is the launch of the new Axolotl door leaf '**Vanguard**'. Manufactured using specialised composites, the door is stronger and more durable than solid core doors and can be routed or machined without compromising the integrity of the door.

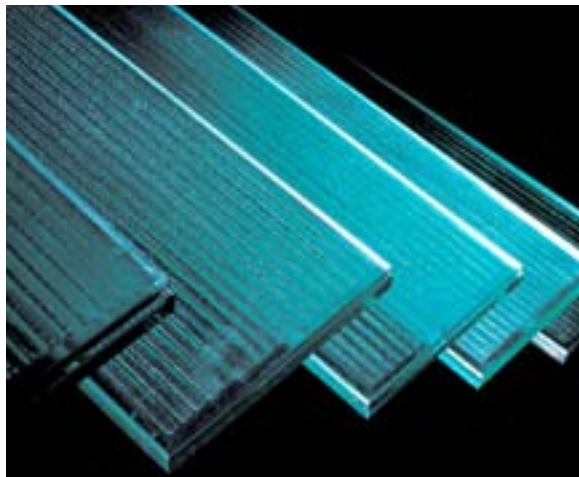

To cater to the growing demand for the dramatic impact of oversized doors, Vanguard comes in sizes up to 1200 x 2850mm, and naturally, can be bonded with any of Axolotl's metals and effects.

Inside this issue

Inside we showcase

- a glass bathroom designed by Stephen Varady
- a supersized glass feature wall,
- a counter and cupboards manufactured in Lustre,
- unique furniture and a beautiful Axolotl Smartfix wall bonded with Copper.

Axolotl Ozone offer a delivery and installation service for all glasswork.

Cracked Earth

Aaron Thredgold says that "Cracked Earth" is a piece inspired by the compelling patterns that can be observed all too often in the dry mudflats and river systems of our natural environment.

This stunning piece was manufactured from 18mm MDF, and bonded with copper to read the underlying cracks that were routed into the surface. An aluminium seam was then inlaid to provide a mildly distorted reflection.

Aaron is currently a student at Curtin University in Perth studying Product & Furniture Design.

Tall Wall

Pictured is one of two feature walls that were created for the Swire Group for Three Pacific Place in Hong Kong.

Constructed from over 1000 square metres of glass, the scale of this feature wall is only apparent when you view the person riding the escalator alongside it.

The first layer of glass panels feature Axolotl Ozone's 'VeilZone' formed glass. The inner layer contains the Buddha's image printed to the laminated glass interlayer.

The wall is backlit to stunning effect.

Both walls were manufactured in Australia before being shipped to Hong Kong.

Beauty by Design

Designed by Ruth Levine Design the intricate pattern pictured right was lasercut from MDF and bonded with Bronze Pearl. As can be seen on the smaller picture below, the design and metal coating lends itself perfectly to the Moroccan style of the room.

With Axolotl's ability to lasercut or router any design, screens and feature walls can be bonded with a multitude of metals and effects to create an individual statement for your next project.

Smart Blade

Axolotl Smartfix was the facade of choice for this blade wall in Bondi designed by Architects Johannson and Associates (AJA).

This superior facade system allows the panels to be mechanically fixed without showing exposed fixings. The end result as can be seen here, is a clean, neat finish that can also be fitted around complex shapes.

A Pearl Patina was applied to copper, enhancing the beautiful natural colours of the metal and resulting in a warm tone to blend perfectly into the environment.

Heavyweight Success

Formed and carved glass are not the only types of glass that we are able to create at Axolotl Ozone.

The recently revamped Raddison Hotel in Manly harmonises with the beach surrounds through the use of heavy weight glass balustrades on the building's facade.

Moving inside, Axolotl Ozone demonstrates its ability to take on the biggest projects with glass fitouts and room signage to 85 rooms.

Frameless heavy weight glass is a brilliant material for balustrades, pool surrounds, shower screens and doors. Axolotl Ozone offers a complete delivery and installation service.

Jewel in the Crown

The Lustre range developed by Ozone has certainly created a stir and it's easy to see why.

The counter and cupboards pictured here were specified for Macquarie Bank in Melbourne and manufactured in Lustre 'Onyx' to create a contemporary and unique look.

Exclusive to Axolotl Ozone and with six beautiful satin finishes in the range, the glass panels can be carved to any design or backlit to create signage or feature walls.

To receive a free sample pack of Lustre please contact sales@axolotlinc.com

Sydney in Bloom

The Axolotl Group sponsored two landscape architects this year for the third 'Sydney in Bloom' and came up gold twice!

Axolotl Ozone manufactured the unique glass table/water feature, bowl and screens for Dean Herald from Rolling Stone. Axolotl Metal manufactured the floral wall in aged Bronze for Peter Bachuk from Osmosis.

Their gold awards were the only two presented at the show.

We are proud to have made a contribution and congratulate the very talented designers on their wins.

Forged Sculpture

The sculptural beauty of the 'Forged Wall'© is demonstrated here bonded with Bronze and aged with patina. In this instance the wall was used externally as a water feature. With over 200 metals and effects the wall can be suited to any style, from contemporary to classic.

Glass Houses

This beautiful bathroom is a complete study in glass with every surface a shining testimony to its beauty.

Stephen Varady designed the bathroom, specifying heavy weight glass for the bath and shower screens and colour backed glass for the walls and floor.

Glass is a natural alternative to tiles, boasting the same easy care properties but with a broader creative palette that is much more unique.

Axolotl Ozone can design and manufacture to any specification and creative vision, in and out of the bathroom. Give us a call if you would like to discuss how you can turn your design project into a glass masterpiece.
